## What are the risks of investing?

### Risk indicator for the Hunter Private Credit Fund

The Fund has not been in existence for five years. The risk indicator for the Fund has been calculated using a mix of actual Fund returns (since its inception) and the returns of the private credit strategy which has been operating within the Harbour Income Fund (another fund managed by Harbour Asset Management Limited, which is part of the Harbour Investment Funds scheme). The risk indicator may therefore provide a less reliable indicator of potential future volatility of this Fund.

The risk indicator is rated from 1 (low) to 7 (high). The rating reflects how much the value of the Fund's assets goes up and down. A higher risk generally means higher potential returns over time, but more ups and downs along the way. To help you clarify your own attitude to risk, you can seek financial advice or work out your risk profile at [www.sorted.org.nz](http://www.sorted.org.nz).

Note that even the lowest category does not mean a risk-free investment, and there are other risks that are not captured by this rating.

This risk indicator is not a guarantee of a fund's future performance. The risk indicator is based on the returns data for the 5 years to 31 March 2026. While risk indicators are usually relatively stable, they do shift from time to time. The risk indicator will continue to be updated in future fund updates.

See the Product Disclosure Statement (PDS) for more information about the risks associated with investing in this Fund.
